

Memo to Program Director

Following is a description of the reports that you will receive when your residents sit for the International In-training Examination. If you would like samples of these reports please contact us at global@abpeds.org.

Program Director Reports: Within this file you will find a number of reports that provide feedback on your resident trainee's performance at an aggregate level.

1. The **Result Roster** report provides trainee scores by level of training.
2. The **Performance Comparison Report** provides mean scores for each training level in your program versus all programs in your country (if appropriate) and all programs in the United States.
3. The **Item Analysis Report** provides information on how trainees in your program performed on each item of the examination. This information is provided in aggregate and by training level.

Resident Trainee Reports: Within these files are individual reports that you can provide to each of your resident trainees.

1. The **Category Performance Report** provides feedback to each trainee on how they performed on items within major categories of pediatric knowledge. This feedback is provided to assist faculty and trainees to identify areas of strength and weakness in broad areas of training.
2. The **Resident Score and Item Feedback Report** provides each trainee with their overall score on the examination as well as specific feedback on individual items that they answered incorrectly. A copy of the **Content Feedback Statements** listing should be provided to residents for reference purposes.

We trust that the results of this examination will assist you, your faculty, and residents in identifying areas of strengths and potential weakness in training and/or individual study. This examination is a valid and reliable estimate of resident knowledge as defined by the American Board of Pediatrics members and is highly related to the content in Nelson Textbook of Pediatrics, which is used as a principal resource in training worldwide.

Please contact me if you have any questions (hph@abpeds.org) about this results package.

Warmest regards,

Hazen P. Ham, PhD
Vice President
American Board of Pediatrics
